

Figure 1: Comparison between MC ξ distribution and data points in the first three y bins of the data, for 7 TeV (left) and 13 TeV (right). All histograms divided by total nr events and multiplied by same normalization factor. Data is not scaled.

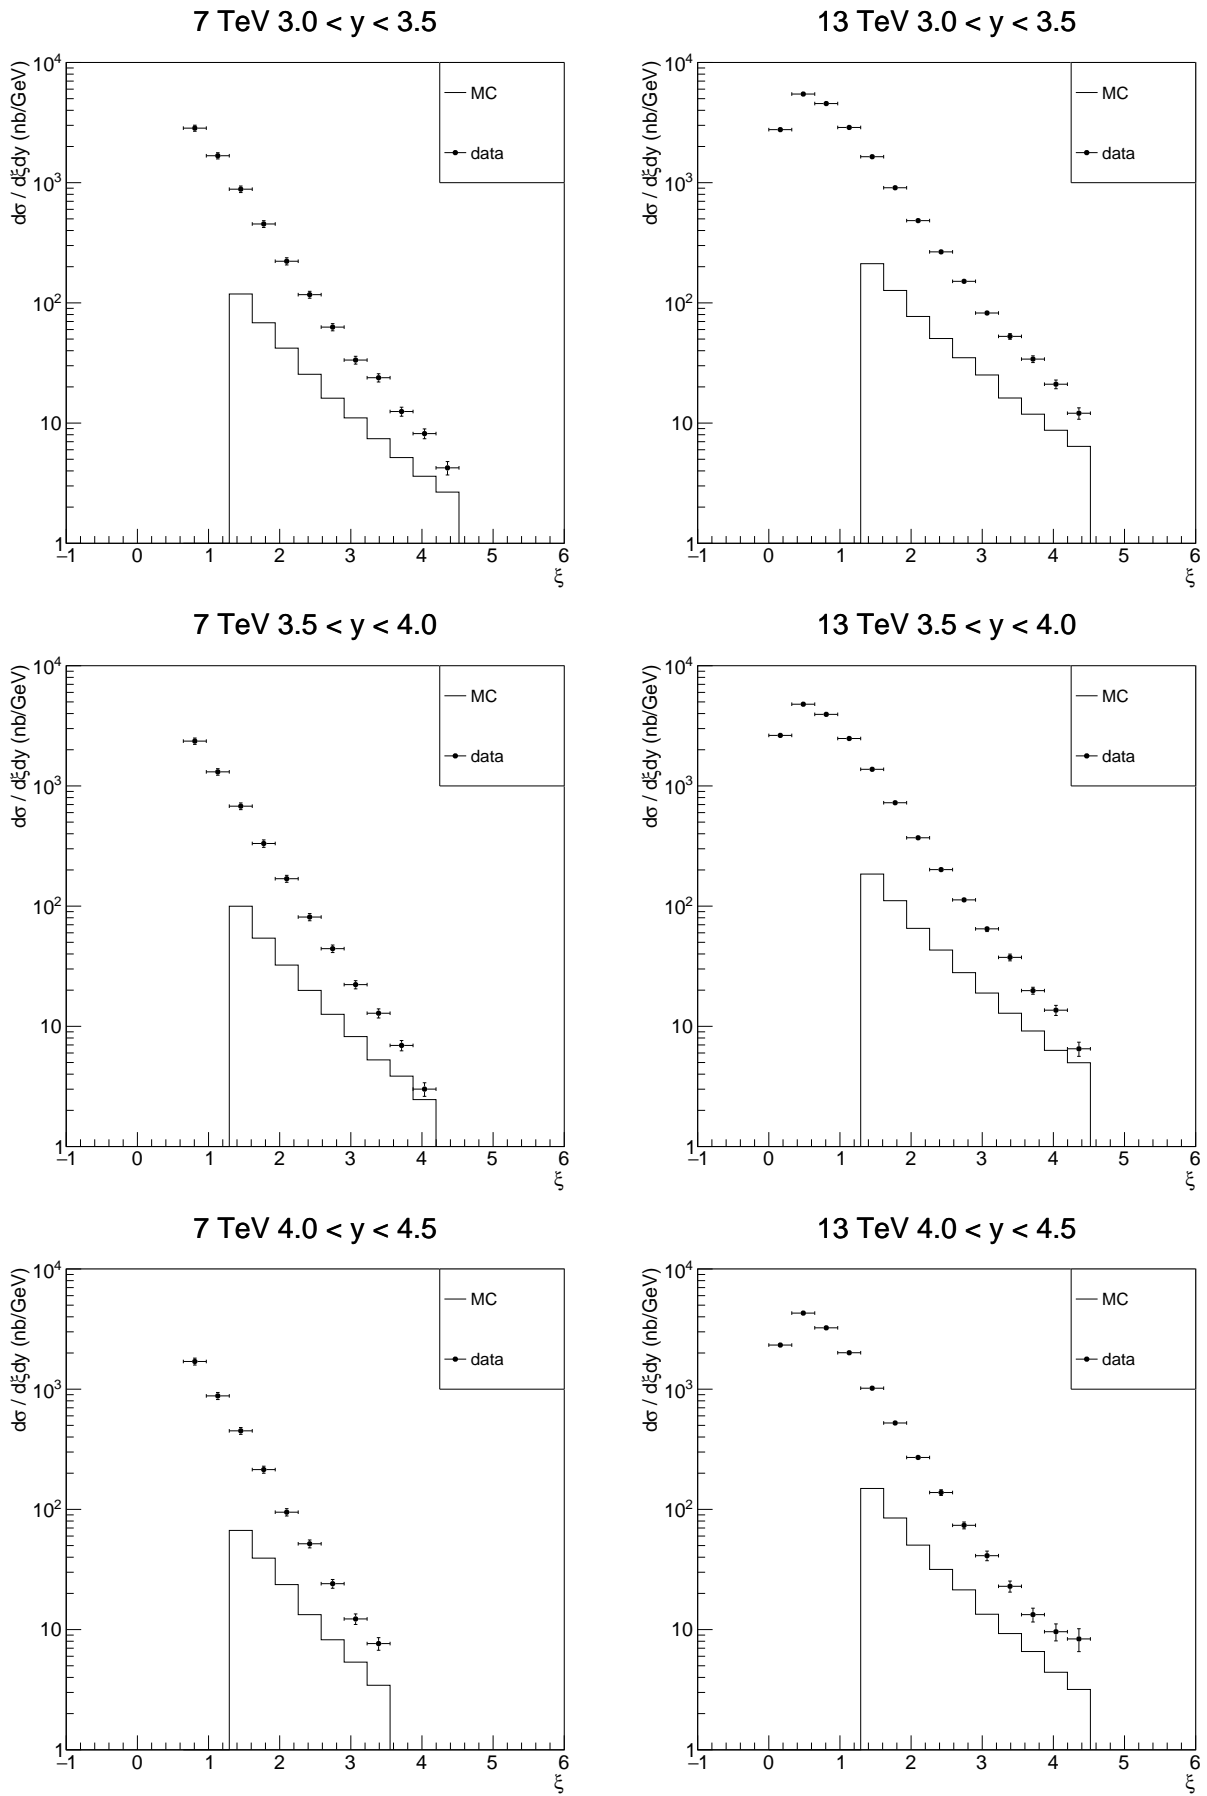

Figure 2: Comparison between MC ξ distribution and data points in the last three y bins of the data, for 7 TeV (left) and 13 TeV (right). All histograms divided by total nr events and multiplied by same normalization factor. Data is not scaled.
